

K pro-3000

THE STRONGEST VITAMIN-K CREAM IN PRODUCTION • (5% u.s.p.)

Aids in healing of most skin problems, including bruises, burns, skin irritations and spider veins. Doctor recommended for use before and after surgeries.

The use of Vitamin K to promote the healthy healing of skin is well documented. Vitamin K creams were formerly only available through physicians and are now available through skin and beauty professionals. It has been used for years by leading surgeons and dermatologists before, during and after surgeries to encourage the healing of skin.

What are the uses of K pro-3000?

K pro-3000 utilizes a natural dermaceutical delivery system for Vitamin K. It aids in the healing of bruises, burns, skin irritations and can eliminate unsightly spider veins. Vitamin K is an organic substance essential in small amounts for normal metabolism. The natural ingredients found in **K pro-3000** have a synergistic effect that stimulates epithelial growth and promotes healthy granulation and clarification of damaged skin tissue.

How does K pro-3000 work?

K pro-3000 utilizes a trans dermal delivery system that allows the Vitamin K to fix the damaged capillary by clotting the blood at the tiny tear, thus stopping the seepage. This allows the tissue time to heal itself. An easy example is if you cut yourself, the wound will not heal properly until it scabs over. The same thing happens with the damaged capillary or artery. It will not heal until the seepage has stopped. Once this is achieved, your spider veins will naturally fade away and with regular use of the **K pro-3000**, they will not reappear.

What is a spider vein?

A spider vein results when a tiny pinhole tear occurs in a capillary or artery beneath the skin. Stress or some type of trauma usually causes this; i.e. childbirth, car accident, sport injury, or from a contact bruise. What you actually see is the blood that has seeped out of that tiny tear or pinhole and has followed the line of the capillary or artery. As an example, imagine putting a drop of water on a pencil – the drop will follow the line of the pencil.

Common reasons people do not get desired results:

Compliance - you must follow the directions and use **K pro-3000 K** twice daily. Irregular use will not allow **K pro-3000** time to work properly.

Failure to use warm water to open the pores to allow the Vitamin K to enter the sub-dermis to the damaged capillary or artery.

Using an over abundance of product. This is worse than not using enough, as it clogs the pores and does not allow the Vitamin K to get through to the sub-dermis.
